SUMMARY

Computer Science undergraduate focused on Machine Learning and Generative AI. Built and evaluated Retrieval-Augmented Generation (RAG) systems to improve factual grounding and reduce hallucinations. Experienced in developing end-to-end ML pipelines including data preprocessing, model training, evaluation, and cloud-based deployment.

EDUCATION

BSc in Computer Science , Ramanujan College, Delhi University	8.82 — Expected 2028
Senior Secondary (PCM) , Navyug School, New Delhi	92.16% — 2025
10th Class , Salwan Boys School, New Delhi	88.66% — 2023

SKILLS

Programming	Python, SQL
Machine Learning	Regression, Classification, Clustering, Model Evaluation
Deep Learning	Neural Networks, CNNs, Transformers (HuggingFace), NLP Pipelines
Libraries	NumPy, Pandas, Scikit-learn, TensorFlow, LangChain
Tools	Docker, Flask, AWS (EC2, S3, Route 53), Linux, Git
Core Concepts	Linear Algebra, Probability, Statistics

PROJECTS

Grounded LLM QA System with Hallucination Evaluation [GitHub](#)
Developed a Retrieval-Augmented Generation (RAG) based document QA system using LLaMA-3.1-8B and LangChain. Designed an automated evaluation framework to compare Base LLM vs RAG responses, reducing hallucination rate from 60% to 15% (45% absolute improvement). Implemented LLM-as-judge validation and optimized chunking and context retrieval strategies to improve factual grounding. *Tech: Python, LangChain, Groq API, Vector Databases, Transformers*

HomoSense AI – Blood Demand Forecasting System [GitHub](#)
Built a predictive analytics system to forecast blood demand using historical healthcare datasets. Performed data cleaning, feature engineering, and trained deep learning models for time-based demand prediction to support resource planning decisions.

Fashion Recommendation System (CNN-Based) [GitHub](#)
Developed an image-based recommendation system using CNN feature extraction and cosine similarity matching. Built an end-to-end inference pipeline and deployed on AWS for scalable recommendations.

Deep Learning Applications (End-to-End Deployment) [GitHub](#)
Developed multiple end-to-end deep learning applications including email classification, fake news detection, sentiment analysis, and image classification. Implemented complete pipelines covering preprocessing, model training, evaluation, and AWS deployment.

EXTRA-CURRICULAR ACTIVITIES

- Secured **Third Prize** in Research Rush Competition for presenting an AI-based research solution.
- Round 2 Finalist – AI MedTech Hackathon (ML-driven healthcare solution).
- Participated in AMD AI Reinforcement Learning Hackathon at IIT Delhi.
