

Job Title: Machine Learning Engineer Intern (Generative AI Focus)

Location: New Delhi / Remote

Duration: 3–6 months

About the Role

We are looking for a passionate Machine Learning Engineer Intern with a strong interest in Generative AI and NLP. You will work on building and deploying intelligent systems using modern ML and LLM-based techniques, including Retrieval-Augmented Generation (RAG).

Key Responsibilities

- Develop and implement machine learning models for real-world applications
 - Build and optimize Retrieval-Augmented Generation (RAG) pipelines
 - Work on NLP tasks such as text classification, sentiment analysis, and question answering
 - Design end-to-end ML pipelines including data preprocessing, training, evaluation, and deployment
 - Experiment with transformer-based models and fine-tuning techniques
 - Deploy models on cloud platforms (AWS preferred)
 - Collaborate on research-oriented AI solutions and evaluate model performance
-

Required Skills

- Strong programming skills in **Python** and working knowledge of **SQL**
 - Understanding of **Machine Learning algorithms** (regression, classification, clustering)
 - Experience with **Deep Learning** and **Neural Networks** (CNNs, Transformers)
 - Familiarity with **NLP pipelines** and transformer frameworks (e.g., HuggingFace)
 - Experience with libraries such as **NumPy, Pandas, Scikit-learn, TensorFlow**
 - Knowledge of **LangChain** or similar LLM orchestration tools
 - Understanding of **evaluation techniques** for ML/LLM systems
-

Preferred Qualifications

- Experience building **RAG-based systems**
- Familiarity with **vector databases** and semantic search
- Hands-on experience with **Docker** and **Flask**

- Experience deploying applications using **AWS (EC2, S3, Route 53)**
 - Understanding of hallucination mitigation in LLMs
 - Exposure to **LLM evaluation frameworks (LLM-as-judge, etc.)**
-

Bonus Skills

- Experience in recommendation systems or forecasting models
 - Participation in hackathons or ML competitions
 - Knowledge of **Linux** and **Git** workflows
-

What We Offer

- Hands-on experience with cutting-edge AI technologies
- Opportunity to work on production-grade ML systems
- Mentorship from experienced engineers and researchers
